

BlueKey

Wireless Trigger Switch

BlueKey is a wireless trigger switch that can be paired with a Windows PC as a wireless keyboard. When MultiGage software is running, every time the user pushes BlueKey, an F9 key stroke is sent to the computer and triggers MultiGage to capture readings of connected gauges. If another software is running and accepts keyboard entry, such as Excel, device readings will be directly keyed into the active software.

Features

- Compact and portable
- Replaceable battery
- Wristband for easy attachment

BlueKey	Specification
Dimensions	35.9x35.9x11mm (250mm wristband)
IP Rating	IP67
Battery	CR2032
Battery Life	6 months
Temperature	-10°C to 60°C
Compatibility	Windows
