

BLUEDIAL

BLUEDIAL WIRELESS DIAL INDICATOR

BlueDial Wireless Dial Indicator integrates a Mitutoyo digimatic dial indicator with Bluetooth Low Energy technology.

Users can now enjoy the convenience and safety brought by wireless technology to remotely view and record measurement readings on their smart devices and Windows PCs, in addition to the high quality of a traditional Mitutoyo indicator: absolute measurement, high resolution, high accuracy, and robust build.

MULTIGAGE SOFTWARE

Motionics software allows the user to monitor multiple measurement devices at once on an iOS, Android, or Windows device, plot the data in a user-interaction-enabled graph, and save and export data. Data can be recorded continuously or with single capture through button tapping.
